

Coding is a journey.

I'm an entry level software engineer in web development and Automation.

This is how I installed necessary tools for my development journey. I usually use the Ubuntu Operating System.

By coding Python mostly I love using VIM text editor, its faster and very customizable. Having vim which is keyboard centric, it allows me to code easily and faster.

Out of the box installed in Ubuntu, I use VIM for my day to day coding.

Here is my Github account for more reference of my past projects: [Wahomethegeek](#)

This is my website: [Personal Website](#)

I also do tech blogs which explain the problems I face in my development journey: [DevPost](#)
